The Challenge

- The client is a health information management company that manages, exchanges & analyzes medical records and healthcare data
- Lack of holistic data solution for payer and providers to empower better healthcare outcomes
- No single platform for structured and unstructured medical records sourced from different EHRs/EMRs
- Disjointed provider experience to request, track and view holistic patient health record
- Performance challenges in on-prem environment for multiple applications

The Solution

- Interop and AI/ML technology (OCR, NLP for handling unstructured data) addressing the issue of disparate health records
- FHIR-based EHR data integration enabling near real-time retrieval of patients' encounters
- Integrated workflow engine to provide end-to-end management of the healthcare ecosystem
- Analytics & BI to reduce abrasion with vendors via faster research time and available insights
